

User Acceptance Testing (UAT) Template

Date	17 June 2026
Team ID	
Project Name	VIP-C2-ShopEZ
Maximum Marks	

Project Overview:

Project Name: ShopEZ Trading Platform

Project Description: A risk-free, real-time virtual stock trading simulator built on the MERN stack, designed for novice investors to practice trading with a virtual \$100,000 starting balance.

Project Version: 1.0 (MVP)

Testing Period: June 1, 2026 to June 17, 2026

Testing Scope:

JWT-based Authentication Flow (Login & Registration redirection)

Live Market Explorer (Real-time price fetching, Buy/Sell execution)

User Dashboard Initialization (\$100,000 default balance) and Recharts asset allocation rendering

Admin Control Room Access and platform-wide trade logging

Graceful error handling and 404 fallbacks

Testing Environment:

URL/Location: Frontend (http://localhost:5173), Backend (http://localhost:5000), Database (mongodb://127.0.0.1:27017)

Credentials (if required): Standard User: `testuser` / `pass123` | Admin User: `adminVIP` / `adminpass`

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	New User Initialization	1. Register new account. 2. Complete login redirect. 3. Navigate to Portfolio.jsx.	User profile created and dashboard initializes with exactly \$100,000 virtual balance.	Profile created; balance shows \$100,000.	Pass

TC-002	Live Market Transaction	1. Search symbol (e.g., AAPL). 2. View live OHL prices. 3. Execute "Buy" order.	Portfolio balance decreases by trade amount; stock added to holdings table.	Portfolio updated correctly.	PASS
--------	-------------------------	---	---	------------------------------	------

Bug Tracking:

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Database Connection Refusal	1. Run <code>npm start</code> on backend. 2. Observe <code>ECONNREFUSED 127.0.0.1:27017</code> error.	HIGH	CLOSED	Diagnosed as inactive background service. Resolved by manually waking up the MongoDB Windows service.
BG-002	React Syntax & Vite Parsing Errors	1. Run Vite compiler. 2. Trigger bracket parsing errors in JSX state handling.	MEDIUM	CLOSED	Fixed syntax handling in Vite. Engineered graceful 404 fallbacks so users see a clean dashboard instead of crash screens.

Sign-off:

Tester Name: [Name of Tester]

Date: [Date of Test Completion]

Signature: [Tester's Signature]

Notes:

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.
